Advance of Southwest Monsoon 2011

Weather conditions

- An upper air cyclonic circulation lies over east Rajasthan and neighbourhood extending upto mid-tropospheric levels tilting southwards with height.
- The other upper air cyclonic circulation lies over central Pakistan and adjoining northwest Rajasthan in lower levels.
- Monsoon trough passes near its normal position.
- Fairly Widespread rainfall has occurred over west Rajasthan.

Advance of Monsoon

With the above favourable conditions, southwest Monsoon has further advanced into remaining parts of west Rajasthan today and thus covered the entire country about one week earlier than its normal schedule.
